# InBodys10

Versatile application with advanced technology

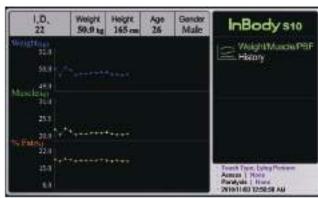

#### Get accurate result of body composition

- · Offers intracellular, extracellular water of each body part, total body water and ratio of ECW/TBW.
- · Easy to have a look at the accumulated result for intracellular, extracellular, total body water with history function.
- · Body composition values are also offered to check whether the change of body water resulted from any other changes.
- · The improved history function to confirm the changes.
- · Enables storage of 50,000 data that is accessible at any time.
- · See how the body composition level changes through a graph.

## **ADVANTAGE**

InBodyS10, with convenient design, allows you to experience its speciality.

Convenient outdoor use with roving battery, portable bag, and thermal printer

▶ Battery (option)

► Thermal printer (option)

▶ Portable bag

Simple and intuitive design recognition of user interface

► Touch screen

► Key pad

Handy use with its own cart (option)

Reasonable touch type electrode use

► Adhesive type electrode

#### **1** Examinee and institution

You can advertise your center effectively. It displays personal information of examinee entered and hospital or clinic name, doctor name and the address.

#### **2** Body Composition Analysis

By explaining the result sheet, your clients will realize what their body is composed of and soon comply with given instruction. In this part, these values demonstrate the weight of each body compositional element that makes up the examinee's total body weight. The estimated values are then compared with the standard values.

#### **3** Muscle-Fat Analysis

Skeletal Muscle and Body Fat Mass are the main subjects for weight control. The horizontal bar graph helps you understand your body composition state compared to standard values. The value next to bar shows you the measured values and the end of bar indicates your position in the range. If the length of the bars would be similar, your body composition is well balanced, while if the lengths of the bars fluctuate, it means your body composition is not balanced.

By showing the proportion of both BMI and percent body fat in their body, InBody S10 can identify hidden obese people. A comprehensive diagnosis of obesity can be made based on various approaches like Percentage Body Fat.

#### **4** Segmantal Lean Analysis

There are more various applications by providing graphs with values in relation to weight of the examinee as well as graphs with the absolute values in relation to standard weight. By measuring muscle distribution by segment, you can check body balance and development level by segment. InBody provides information essential to check the effect of rehabilitation treatment or establish a direction for exercise.

#### **5** Segmental Water Analysis

InBody S10 shows segmental edema score as well as edema score for the whole body.

#### **6** ECW/TBW

The graph shows the ratio of ECW to TBW and ECF to TBF. Edema score of healthy person is maintained in normal range.

#### **1** Nutriton Index

Basal Metabolic Rate, Body cell mass, Bone mineral content. InBody shows you commonly used indexes related to body composition.

#### **8** VFA(Visceral Fat Area)

It tells how much of body fat is accumulated in visceral areas.

#### **9** Body Water History

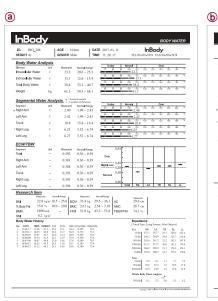

Examination results will be stored so that changes in body composition of the examinee can be tracked.

Bioelectrical Impedance Analysis (BIA) Impedance(Z)

Measurement Items

30 impedance measurements by using 6 different frequencies (1kHz, 5kHz, 50kHz, 250kHz, 500kHz, 1000kHz) at each

5 segments of the body(right arm, left arm, trunk, right leg, left leg)

15 reactance(Xc), phase angle(θ) measurements by using 3 different frequencies (5kHz, 50kHz, 250kHz) at each Reactance(Xc)

Phase Angle( $\theta$ ) 5 segments of the body(right arm, left arm, trunk, right leg, left leg)

Electrode Method Tetrapolar 8-Point Tactile/Adhesive Electrode System

Measurement Method Direct Segmental Multi-frequency Bioelectrical Impedance Analysis Method, DSM-BIA method

Body Composition Calculation Method No use of Empirical Estimation

#### **Feature Specifications**

Logo Display Possible to input name of the user's place, address and contact number

Type of Results Sheet Basic: Body composition results sheet (Printed Paper/Blank Paper)

Body water results sheet( [ , [ ] ) (Blank Paper) Option: Thermal results sheet(when using thermal printer)

Portability Indoor - with own cart(optional), Outdoor - with own portable bag

Posture Lying Posture, Seated Posture, Standing Posture

Electrode Type Touch Type, Adhesive Type

Setting of Dialysis Mode Measurement time(before/during/after dialysis), Access position, Paralyzed position set available

Data Storage Possible to save the results when ID is entered(Up to 100,000 measurements)

User's Interface Touch screen and key pad

Use of USB Storage Device Possible to backup and transfer data to USB storage device (compatible with Excel and Lookin' Body software)

Should use the USB storage device provided by InBody

Possible to backup data through USB storage device and to restore the data to the InBody Data Back-Up

Printer Connection USB port

#### **Other Specifications**

Applied Rating Current Under 100µA(1kHz), 500µA(over 5kHz)

50VA Power Consumption

AC100~240V, 50/60Hz, 1.2A Adapter Power Input

> Power Output DC 12V, 3.4A

Display Type 800 × 480 Touch Color LCD

External Interface RS-232C 1EA, USB Slave 1EA, USB Host 1EA

Compatible Printer Laser/Inkjet PCL 3 or above and SPL(Printer recommended by InBody)

Thermal Printer(Optional)
